

Appendix 3 – Summarized data from completion report of Culver et al. 2015 for plankton (phyto- and zoo-) and chlorophyll *a* samples obtained for this GLRI project. Results from chl *a* and pheo *a* tests for 2011-2013 are presented below. Complete data for plankton counts by date, species types, numbers observed per species and location are presented in the project’s shareable data set package in excel spreadsheet format.

Table A3-1. Cuyahoga chlorophyll *a* for 2011 and 2012

This is using the Lorenzen method and calculations have subtracted out the blank.

When there are two blanks, the value used for the blank is an average of two, except where noted (in green).

Table A3-3.

Cuyahoga chlorophyll *a* for 2014

Grand River chlorophyll *a* for 2014

This is using the Lorenzen method and calculations have subtracted out the blank.

When there are two blanks, the value used for the blank is an average of two (* = no blanks).

Phytoplankton

Plankton data are presented by taxonomic group in the shared dataset. Data in numbers, density (for volume of water sampled) and biomass are recorded for each sample location and date, 2011-2014. The spreadsheets for phyto- and zoo-plankton are too large for inclusion in the printed report.

There were fewer rare taxon identified that were not in our phytoplankton macro, because we have more generalized categories, but a few that were found were entered based on their family or a generalized category based on its shape (for example: solitary green, spiny green, colonial green). These taxon are:

- *Phacotus* spp. was entered as a solitary green
- *Quadrigula* spp. was entered as *Schroederia* (same family)
- *Tetrastrum* (Family Scenedesmaceae) was entered as a Colonial green w/o sheath, because of the measurements provided
- *Westella* was entered as a Colonial green w/o sheath.

Phytoplankton data presented in the dataset include:

Sample Info	Date Sampled
	Sample Location
Chlorophyta Densities (#/ml)	<i>Actinastrum</i>
	<i>Ankistrodesmus</i>
	<i>Carteria</i>
	<i>Characium</i>
	<i>Chlamydomonas</i>
	Chlorophyte Filament

	<i>Merismopedia</i>
	<i>Microcystis</i>
	Narrow Filament
	<i>Oscillatoria</i>
	<i>Spirulina</i>
Pyrrhophyta Densities (#/ml)	<i>Ceratium</i>
	<i>Gymnodinium</i>
	<i>Peridinium</i>

Table A3-4a. Temporal and spatial variation in the taxonomic composition of phytoplankton biomass (mg wet weight/L) in samples collected in 2011 from the Cuyahoga River and adjacent areas of Lake Erie. Stations are in the lower river (LR1 and LR2), the Old Channel (OC) of the river, in the Harbor inside the breakwall (H), and in Lake Erie outside the breakwall (OB).

Date Sampled	Sample Location	Chloro-phyta	Chryso-phyta	Crypto-phyta	Cyano-phyta	Pyrrho-phyta	Total Pp

Table A3-4b. Temporal and spatial variation in the taxonomic composition of phytoplankton biomass (mg wet weight/L) in samples collected in 2012 from the Cuyahoga River and adjacent areas of Lake Erie. Stations are in the lower river (LR1 and LR2), the Old Channel (OC) of the river, in the Harbor inside the breakwall (H), and in Lake Erie outside the breakwall (OB).

Table A3-4d. Temporal and spatial variation in the taxonomic composition of phytoplankton biomass (mg wet weight/L) in samples collected in 2014 from the Cuyahoga River and adjacent areas of Lake Erie. Stations are in the lower river (LRO, LR1, and LR2), the Old Channel (OC) of the river, in the Harbor inside the breakwall (H), and in Lake Erie outside the breakwall (OB). The results from OC, H, and OB are not included in this table.

Zooplankton

The zooplankton macro does not account for every organism found, such that we had to enter some species in a category that was most similar to their size and taxa. This is the list of organisms that were placed in the most similar category:

- *Bosminopsis deiters* was entered as *Bosmina* spp.
- *Ectocyclops phaleratus* was entered as *Paracyclops fimbriatus poppei*
- *Daphnia rosea* was entered as *Daphnia pulex*
- *Macrothrix* spp. was entered as *Ilyocryptus* spp.
- *Macrocyclops albidus* was entered as Unidentified cyclopoids
- *Microcyclops rubellus* was entered as *Tropocyclops prasinus mexicanus*
- *Sida crystallina* was entered as *Diaphanosoma* spp.
- *Skistodiaptomus pygmaeus* was entered as *S. oregonensis*
- *Camptocercus* spp., *Kurzia latissima*, *Leydigia* spp., and *Alonella* spp. were entered in the Chydoridae family category.

Zooplankton data presented in the dataset (complete data included in files transferred to USEPA and are available from the PI for reference) include:

Table A3-5b. Temporal and spatial variation in the taxonomic composition of zooplankton biomass (μg dry weight/L) in samples collected in 2012 from the Cuyahoga River and adjacent areas of Lake Erie. Stations are in the lower river (LR1 and LR2), the Old Channel (OC) of the river, in the Harbor inside the breakwall (H), and in Lake Erie outside the breakwall (OB).

BIOMASS TOTALS ($\mu\text{g/L}$)

Table A3-5c. Temporal and spatial variation in the taxonomic composition of zooplankton biomass (μg dry weight/L) in samples collected in 2013 from the Cuyahoga River and adjacent areas of Lake Erie. Stations are in the lower river (LRO, LR1 and LR2), the Old Channel (OC) of the river, in the Harbor inside the breakwall (H), and in Lake Erie outside the breakwall (OB).

BIOMASS TOTALS ($\mu\text{g/L}$)

Table A3-5d. Temporal and spatial variation in the taxonomic composition of zooplankton biomass (μg dry weight/L) in samples collected in 2014 from the Cuyahoga River. Stations are in the lower river (LRO, LR1 and LR2), the Old Channel (OC) of the river, and in the Harbor inside the breakwall (H). Results from OC and H are not included in this table.
