BRANDYWINE PRESERVE RESTORATION

*Brandywine Creek
HUC12 #: 41100020404)*

PROJECT OVERVIEW

This 200 acre wetland complex with over 150 acres of Category 3 wetland, 1.5 miles of stream including the Mainstem of Brandywine Creek, and 3/4 innodation with the FEMA floodplain was conserved by the West Creek Conservancy in early 2020. The opportunity for restoration lies within the boundary of the Brandywine Creek and enhancement/ reconnection of adjacent wetlands. This unique opportunity has kept a retention capacity preserved that would not have been able to be salvaged if development was to move into this land.

The AOC has specific targets to meet before it is taken off the list of impaired waters, or “delisted” as outlined by the Great Lakes Water Quality Agreement (GLWQA). The Advisory Committee developed a plan to identify and rectify the Beneficial Use Impairments (BUIs) to categorize criteria for restoration and create benchmarks toward achieving the goals of delisting.

Learn more about the status of the Cuyahoga River AOC Management Action progress and current state of the delisting efforts at www.cuyahogaoc.org.
